

Garv Sethi

AI Tools & Prompt Engineering | Cybersecurity & Digital Forensics

Jammu, India | +91 9103359363 | sethi.garv2006@gmail.com | github.com/strumgewehr | linkedin.com/in/garv-sethi-932bbb328

SUMMARY

AI engineer specializing in applied prompt engineering and LLM-assisted workflows, paired with hands-on cybersecurity experience in digital forensics and incident response at IIT Jammu. Builds AI systems that do real analytical work: summarizing evidence, correlating incidents, and accelerating investigations.

EXPERIENCE

Cybersecurity Intern, IIT Jammu | Jun 2026 - Aug 2026

- Performed digital forensics and incident response (DFIR) across Windows and Linux environments, analyzing disk images, memory dumps, and system logs to identify indicators of compromise.
- Conducted network security assessments and threat hunting using Wireshark, Nmap, and Zeek.
- Automated recurring log-parsing and IOC-extraction workflows in Python to speed up analysis turnaround.

QA Tester (Freelance), Test.io | Apr 2026 - Present

- Perform manual testing across web and mobile applications, exploring features end-to-end to surface functional and usability defects.
- Write and submit detailed bug reports covering reproduction steps and expected vs. actual behavior, with bugs accepted across multiple test cycles.

FLAGSHIP PROJECT

Redoubt Ops - Centerpiece

Network Security Incident Reconstruction & Digital Forensics Platform

- Designed and tuned LLM-assisted analysis workflows that summarize incident timelines, surface high-risk evidence, and turn raw logs into analyst-ready narratives, the core intelligence layer of the platform.
- Architected a modular DFIR platform automating log ingestion, evidence correlation, and timeline reconstruction to speed up manual triage.
- Built an interactive React/TypeScript dashboard to visualize AI-generated summaries alongside correlated evidence in real time, backed by a FastAPI, Celery, Redis, and PostgreSQL service.

Skills: Prompt Engineering, LLMs, Python, FastAPI, React, TypeScript, Docker

OTHER PROJECTS

EGRET — full-stack news sentiment intelligence platform (Python/FastAPI) applying NLP scoring to surface market-relevant signals from multi-source news. Skills: Python, FastAPI, NLP, REST API

SVAS - Soldier Vital Alert System — IoT system capturing soldier vital signs via field sensors, with real-time alert logic built for low-latency field deployment. Skills: Python, IoT Sensors, Real-Time Alerting

ROUGE — privacy-focused chat app supporting anonymous, encrypted real-time messaging and secure file sharing with minimal metadata retention. Skills: Python, WebSockets, Authentication

Oviol — text sentiment classification pipeline, benchmarking multiple models to select the best-performing approach. Skills: Python, scikit-learn, NLP

EDUCATION

B.Tech, Computer Science & Engineering, Shri Mata Vaishno Devi University | 2024 - 2028

Jammu, India | Student Representative, 10th Convocation (attended by the Vice President of India and Governor of Jammu & Kashmir)

CERTIFICATIONS

Building with the Claude API - Anthropic Academy: prompt engineering, tool use, API-based Claude integration. | AWS - Intro to Generative AI: LLM fundamentals, prompt design, generative model deployment.

SKILLS

AI & Prompt Engineering: Prompt Engineering, LLMs, LangChain, Generative AI, Claude, Gemini, GitHub Copilot, Cursor

Cybersecurity: Digital Forensics, Incident Response, Network Security, Threat Hunting, Wireshark, Nmap, Volatility, YARA

Languages: Python, JavaScript, TypeScript, SQL

Backend & APIs: FastAPI, REST APIs, Celery, Redis

Tools & Cloud: Git, GitHub, Docker, AWS, PostgreSQL, SQLite
